Basseqat Performance Marketing, Funnel, and WhatsApp Automation Brief

Agency: Admireworks

Scope: Funnel strategy and build, paid media management, AI-assisted WhatsApp conversation handling, retargeting, optimization, and reporting

1) Brand and Business Context

Brand: Basseqat

Category: Agriculture investment in Date Palms / farm-based investment opportunity

Nature of Offer: High-consideration, trust-led, proof-first, process-first, not hype-driven

Reserved Brand Word: Transparency

Core Principle: Real operations, real documentation, real process, calm and credible communication

What Makes This Project Different:
This is not a low-consideration impulse offer and not a “quick lead” product. The customer must move through trust, proof, process understanding, and qualification before becoming a serious prospect.

2) Main Objective

Build and manage a compliant performance system that turns qualified traffic into serious WhatsApp conversations and high-fit leads through a structured funnel.

The system should do all of the following:

- attract the right audience
- pre-qualify traffic before or during conversion
- reduce low-fit “guarantee seekers”
- improve qualified WhatsApp conversations
- support movement from first inquiry to the next step such as process explanation, virtual tour, visit request, or sales handoff

3) Scope of Work for Admireworks

Admireworks will be responsible for three integrated workstreams:

A. Funnel Build and Conversion System

Build the full conversion journey from ad click to lead capture to follow-up logic.

This includes:

- funnel mapping from awareness to consideration to conversion to nurture
- landing page strategy and structure
- lead capture logic
- WhatsApp-first conversion path
- retargeting path
- qualification steps
- CRO and optimization recommendations
- tracking architecture and UTM structure

B. Paid Media Management

Plan, launch, manage, and optimize paid campaigns that feed the funnel.

This includes:

- campaign architecture by platform
- audience hypothesis testing
- creative angle testing
- retargeting setup
- budget allocation logic
- daily checks and weekly optimization decisions
- reporting tied to lead quality, not vanity only

C. AI-Assisted WhatsApp Replies and Lead Handling

Design and manage an AI-assisted WhatsApp response flow that handles first contact, FAQs, soft qualification, objection routing, and sales handoff.

This includes:

- first-response logic
- branch logic by lead intent
- FAQ handling
- qualification questions

- escalation rules to human sales
- handoff conditions
- response tone rules
- follow-up sequence for unresponsive or undecided leads

4) Target Audience

Primary

Egyptian expats in Saudi Arabia, with possible GCC expansion later

Typical profile:

- age 40+
- family-oriented
- future-focused
- saving for Egypt
- cautious and skeptical
- wants proof, documentation, and seriousness
- has low tolerance for hype
- may have seen too many exaggerated offers before

Secondary

Older Egypt-based segment and higher-ticket prospects

The agency should optimize for fitness **and seriousness**, not only for volume.

5) Campaign Phasing

Phase 1: Month 1

Primary objective: **Awareness**

The first month should focus mainly on:

- introducing Basseqat to the right audience
- building first-layer credibility
- testing audience quality

- testing creative hooks and education angles
- identifying which segments respond with serious intent

Phase 2: Month 2

Primary objective: **Consideration + early qualified conversations**

The second month should focus on:

- improving traffic quality
- strengthening trust and proof
- increasing qualified WhatsApp starts
- optimizing landing page and message flow
- reducing low-fit leads

Phase 3: Month 3 onward

Primary objective: **Scaled performance upon sales validation**

After proof of sales success, the system should scale in a disciplined way while keeping lead quality and compliance intact.

6) Ad Budget and Distribution

Approved Budget

- **Months 1 and 2: EGP 100,000 per month**
- **Month 3 onward: EGP 300,000 per month**, conditional on proven sales success

Budget Management Principle

The first two months should be managed with a **testing and learning mindset**, not aggressive scaling. Budget increases should be based on **sales quality and business results**, not just message volume or cheap leads.

Recommended Budget Distribution — Month 1

Because Month 1 is awareness-led, the distribution should prioritize reaching the right audience and identifying strong early signals.

- **70% Awareness campaigns**
- **20% Consideration / traffic / landing page engagement**
- **10% Retargeting and early WhatsApp conversion testing**

Month 1 Example Distribution based on EGP 100,000

- **EGP 70,000** → Awareness
- **EGP 20,000** → Consideration / traffic
- **EGP 10,000** → Retargeting / WhatsApp conversion testing

Recommended Budget Distribution — Month 2

Month 2 should begin shifting from pure awareness into trust-building and qualified conversion.

- **40% Awareness**
- **35% Consideration / trust / landing page engagement**
- **25% Conversion and retargeting**

Month 2 Example Distribution based on EGP 100,000

- **EGP 40,000** → Awareness
- **EGP 35,000** → Consideration
- **EGP 25,000** → Conversion + retargeting

Recommended Budget Distribution — Month 3 Onward

Once sales success is confirmed, the budget can scale with stronger emphasis on qualified lead generation and conversion efficiency.

- **25% Awareness**
- **35% Consideration**
- **40% Conversion and retargeting**

Scaled Example Distribution based on EGP 300,000

- **EGP 75,000** → Awareness
- **EGP 105,000** → Consideration
- **EGP 120,000** → Conversion + retargeting

Additional Expectation

Admireworks should validate or improve this allocation based on:

- actual lead quality
- conversion rate by audience
- sales feedback
- WhatsApp qualification quality

- retargeting pool size
- funnel drop-off patterns

7) Conversion Goal

Primary conversion goal:

- start a qualified WhatsApp conversation

Secondary conversion goals:

- request brochure and process details
- register for webinar or virtual tour if active
- request a farm visit if the lead is high fit

The CTA path should remain calm and singular at each step, without overload or urgency language.

8) Messaging Direction

Core Message

Basseqat offers a serious, transparent, real agricultural participation experience built on documentation, real operations, and the ability to verify the process.

Must Communicate

- seriousness
- transparency
- real process
- documentation
- proof assets
- ability to ask, verify, and understand before deciding
- long-term mindset
- human guidance and clear next step

Must Avoid

- exaggerated financial promise language
- urgency tactics

- emotional pressure
- “easy money” tone
- wealth symbolism
- aggressive direct-response style
- anything that makes the offer sound like a shortcut

9) Compliance and Brand Safety

This category is sensitive and must be handled as an investment-like or regulated-adjacent offer.

Forbidden

Do not use or imply:

- guaranteed return
- fixed return
- risk-free
- 100 percent safe
- easy profit
- quick money
- “can’t lose”
- توظيف أموال
- luxury outcome framing
- fake proof
- fake testimonials
- fake numbers
- unsupported comparisons

Required

- use scenario-based wording when discussing outcomes
- keep claims grounded in real process and available proof
- escalate any gray-zone wording for approval
- keep public-facing copy compliant and conservative

- do not promise results in media planning or reporting

10) Funnel Expectations

Admireworks is expected to design the funnel in stages:

Stage One — Awareness

Goal: Introduce Basseqat as a serious and transparent category option

Likely assets:

- educational ads
- myth-busting angles
- category explanation
- calm curiosity hooks
- proof-first short videos

Stage Two — Consideration and Trust

Goal: Build confidence through process explanation and proof

Likely assets:

- how it works
- documentation logic
- proof content
- FAQ content
- visit or virtual tour logic
- objection handling

Stage Three — Conversion

Goal: Drive the user into one clear next step, preferably WhatsApp

Likely assets:

- landing page
- offer explanation page
- click-to-WhatsApp flow
- simple qualification step

- clear CTA

Stage Four — Nurture and Follow-up

Goal: Continue trust-building and move the lead toward sales readiness

Likely assets:

- WhatsApp follow-up sequence
- retargeting creative
- FAQ replies
- proof reminders
- next-step invitation

11) Landing Page Expectations

Admireworks should either build or specify the required landing page structure.

Minimum structure expected:

- headline for the right audience
- credibility-led subheadline
- problem framing
- value pillars
- how it works steps
- proof section using only real proof
- objection FAQ
- repeated CTA
- compliance wording where needed

Rules:

- keep CTA singular
- no fake testimonials
- no fake numbers
- mobile-first readability
- reduce friction

- prioritize clarity and trust

12) WhatsApp AI Reply System Expectations

Admireworks should build and manage a structured AI-assisted WhatsApp flow, not just auto-replies.

The system should be able to:

- greet and identify lead source
- give a calm first response
- explain the next step simply
- answer basic FAQs
- identify intent and seriousness
- flag guarantee-seeking or low-fit behavior
- collect core qualification data
- direct high-fit leads toward the proper next step
- escalate sensitive or complex questions to a human
- support follow-up if the lead stops replying

Suggested Qualification Areas

- country of residence
- interest type
- timeline to decide
- seriousness level
- preference for details, call, virtual tour, or visit
- whether the lead is asking for guarantees or showing misunderstanding

Tone for Replies

- calm
- respectful
- serious
- human
- informative

- never robotic
- never pushy
- never cheap-salesy

Escalation Required When

- user asks legal or return-specific questions
- user asks for guarantee or fixed outcome
- user requests a farm visit
- user appears highly qualified
- user raises criticism or trust concerns
- discussion becomes too nuanced for automation

13) Paid Media Expectations

Admireworks should propose and manage a platform-specific media structure.

Expected outputs:

- recommended platforms with rationale
- campaign architecture by platform
- cold audience logic
- retargeting windows
- exclusions
- creative angle matrix
- test plan
- optimization plan
- budget split by funnel stage
- measurement logic

The agency should optimize toward **qualified lead quality and sales relevance**, not only low CPC or cheap conversation starts.

14) Creative Direction for Performance Assets

Performance creatives must still respect the brand system already defined in the social brief.

Allowed Direction

- real farm visuals
- documentary feel
- irrigation, operations, workers, equipment, cultivation process
- process explanation
- proof snippets
- what can be verified
- calm educational hooks
- “how it works” framing
- trust-building FAQ angles

Not Allowed

- money imagery
- luxury or wealth symbolism
- “profit” icons
- aggressive countdowns
- hard pressure CTAs
- generic get-rich investment clichés
- unsupported financial claims

15) Deliverables Expected from Admireworks

Strategy and Build

- funnel map
- landing page wireframe or build specification
- conversion path logic
- WhatsApp flow map
- retargeting logic
- CRO checklist

- proof asset gap list
- tracking blueprint
- UTM naming convention
- CRM field requirements

Paid Media

- campaign structure
- audience hypotheses
- creative angle matrix
- budget logic
- experiment plan
- optimization cadence
- weekly and monthly reporting

WhatsApp AI and Lead Handling

- response logic tree
- qualification logic
- FAQ library
- escalation rules
- follow-up sequence
- handoff rules to sales
- reporting on lead quality and conversation outcomes

16) KPIs

Primary KPIs

- WhatsApp conversation start rate
- Qualified conversation rate
- MQL rate
- Cost per qualified conversation
- Cost per MQL

MQL Definition

An MQL is a qualified lead with a clear long-term investment mindset who fits one of these two profiles:

- willing to invest EGP 350,000+, with the ability to pay around EGP 15,000 monthly for 24 months, and willing to wait around 4 years before starting to receive yearly returns

Or

- willing to invest EGP 700,000 upfront and leave the investment for around 4 years before receiving returns

To qualify as an MQL, the lead must also demonstrate seriousness, patience, and alignment with the long-term nature of the opportunity.

Secondary KPIs

- Landing page conversion rate
- CTR
- CPC
- Retargeting conversion trend
- Reply speed
- AI-to-human handoff rate
- Visit interest rate
- Webinar or virtual tour interest rate

Important Note

During the first two months, performance should be evaluated with a **learning and trend-based lens**, especially because Month 1 is primarily an awareness phase.

17) Tracking and Reporting Requirements

Admireworks should define:

- key conversion events
- event naming
- UTM naming convention
- CRM source capture fields
- funnel stage definitions

- lead status definitions
- reporting cadence
- attribution assumption logic

Weekly Reporting Should Include

- spend
- impressions
- CTR
- landing page views
- WhatsApp starts
- qualified conversations
- MQLs
- key objections
- low-fit lead patterns
- tests run
- actions taken

Monthly Reporting Should Include

- what improved lead quality
- what reduced low-fit traffic
- best-performing audience hypotheses
- best-performing creative angles
- landing page and WhatsApp flow insights
- next month's optimization decisions

18) Approval Workflow

- all funnel copy, landing page copy, ads, reply logic, and retargeting messages require approval before launch
- any performance-like wording, scenario examples, or outcome framing requires extra compliance check

- any reply flow involving risk, returns, legal wording, documentation claims, or visit promises must be approved before automation goes live

19) Inputs We Will Provide

- existing brand guardrails
- core messaging
- reserved word and tone rules
- visual direction
- farm images and videos available
- access to proof assets already captured
- legal references that can be mentioned where approved
- sales FAQs and scripts available so far
- consultant review and approval

20) What Admireworks Must Flag Early

Admireworks should highlight blockers immediately if any of these are missing:

- landing page not ready
- tracking not ready
- proof assets insufficient for conversion
- WhatsApp Business or automation stack not ready
- CRM status flow unclear
- qualification definition unclear
- webinar or visit process not operational
- legal approval wording incomplete

Facts Used

- Basseqat is a trust-led, proof-first, transparency-driven agricultural participation offer
- primary market starts with Egyptian expats in Saudi Arabia

- WhatsApp is the preferred conversion path
- the brand forbids guaranteed-return language, hype, urgency, and money-style visuals
- Month 1 is primarily for awareness
- budget is EGP 100,000 per month for the first two months
- budget increases to EGP 300,000 per month after sales success is proven

Assumptions Made

- Admireworks is responsible for building the landing page or at minimum specify it
- WhatsApp automation will be AI-assisted, not fully autonomous without human escalation
- performance will optimize toward qualified leads, not raw lead volume
- budget distribution percentages are a recommended starting framework and may be refined based on real performance

Best Regards

Khaled Nasseredin

Basseqat Chairman
